Excerpt from Recent Progress in Dynamo-Electric Machines: Being a Supplement to Dynamo-Electric Machinery Fifteen months ago, I had the honor of delivering in this place a course of three Cantor Lectures on Dynamo electric Machinery. In the first of those lectures, the endeavor was made to trace out a physical theory of the action of dynamos, and to follow the theory into its bearings upon the construction of such machines. In the second lecture, a large number of actual machines were considered and compared with one an other and with the theory; and in the third lecture, the dynamo was considered in its functions as a mechanical motor.
